Chapter 11

Program files

Here are some programs in Python® and JavaScript® to use with Chapter 11. These programs are just starters for the exercises; please feel free to modify them in any way you please to help your teaching. Please check that each program works before you use it with your students. I have checked them as I used them but it is always worth checking that they work on your school's computer system.

I tested the programs using Firefox® for the JavaScript and Python and Idle® version 3.3.0. I wrote and edited the programs with Notepad++.
