

Chapter 13

Program files

Here is the Access® database to use with Chapter 13. This is just to start you off; please feel free to modify it in any way you please to help your teaching. Please check that the database works before you use it with your students. It worked on my computer system but it is always worth checking that it will work on your school's computer system.

I used Access 2010® to create the CubScout database.
